

# DIABOLO

Distributed, Integrated and Harmonised  
Forest Information for Bioeconomy Outlooks

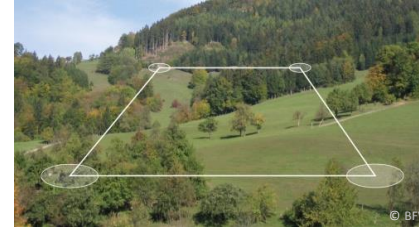

**Dr. Klemens Schadauer, BFW, Austria**  
**Prof. Tuula Packalen, Luke, Finland (DIABOLO Coordinator)**

European  
Commission

DIABOLO has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 633464.

[www.diabolo-project.eu](http://www.diabolo-project.eu)

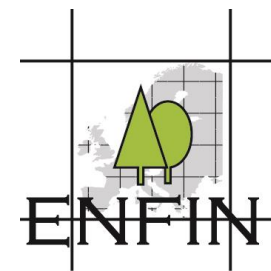

## DIABOLO originates from ENFIN

- National forest inventories (NFIs)
  - sound statistical designs
  - fulfilling e.g. the green house gas (GHG) reporting quality criteria
- Country-specific NFI methods
- European National Forest Inventory Network (ENFIN) since 2003 to work on harmonisation (<http://enfin.info>)

ENFIN, 30 countries

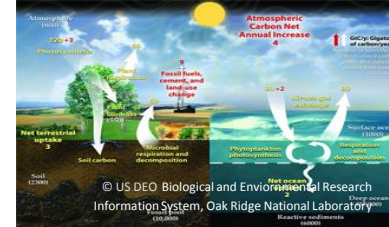

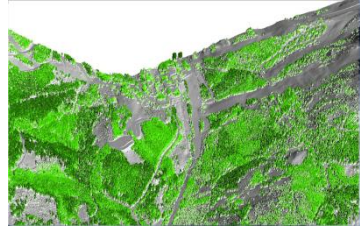

## DIABOLO aims at bridging the gaps in the provision of forest information by

- developing Europe-wide harmonised forest information
- improving multi-purpose forest inventory
- improving forest disturbance monitoring using new European satellite data
- modelling biomass supply and trade-offs with other ecosystem products and services

33 DIABOLO partners,  
25 countries

## DIABOLO supports climate change mitigation and adaptation by

- Harmonised and enhanced estimation of European forest –based biomass supply and carbon pools
  - greenhouse gas (GHG) reporting
  - identification of mitigation potential
- Better integration of remote sensing and field data
  - faster mapping of forest disturbances in Europe
  - promoting biomass mobilization in local scale

DIABOLO produces information  
for bioeconomy policies and  
future post-fossil alternatives from  
European to local levels.

The results will benefit all EU  
member countries on regional,  
national and European level.
