# Verifiers in Hungary

Gábor Berki  
Hungarian National Climate Protection Authority

MINISTRY FOR  
INNOVATION AND TECHNOLOGY

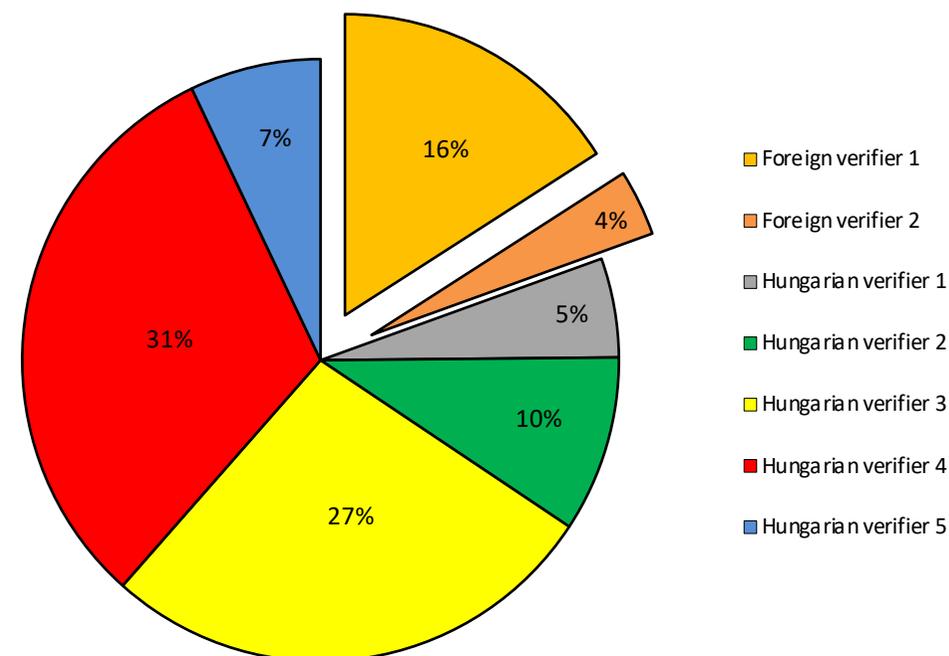

## Percentage of verifiers (year 2018)

INNOVATION AT WORK

- Number of installations: 169
- Total of foreign verifiers: 20% of the verification reports
- Foreign verifiers have accreditation for most of the ETS activities
- Only one Hungarian verifier has accreditation for more than 3 ETS activities
- One of the Hungarian verifiers requested accreditation for only one combustion sub-activity

Distribution of verifiers in the reporting year 2018

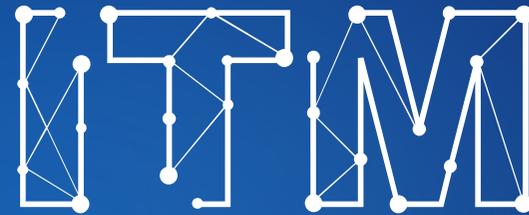

## Hungarian specifics

- The limited number of the accredited activities is not specifically caused by the preparedness of the verifiers
- Very high accreditation fee per ETS activity
- Few HU accredited verification bodies (5 verifiers with competence in a total of 12 ETS activities)
- Low number of personnel, almost no fluctuation (rigid personal practices)
- ETS activities having low number of installations are almost exclusively verified by non-HU accredited verifiers
- No information about new potential verification bodies on the market

## Improvement suggestions

- Reduction of accreditation fees could attract more verifiers
- Workshops to be organized by CA and Hungarian NAB jointly
- More intensive utilization of foreign verifiers are limited due to language difficulties and most likely higher verification fees
- Improve communications among CAs and NABs
- Joint inspections of CA and NAB
- CA participation in NAB site visit during accreditation procedure

INNOVATION AT WORK

Thank you  
for your attention!
