

AER Inspection

6th EU ETS Compliance Conference

6 November 2015

Direction générale de l'Aviation civile

Ministère de l'Écologie, du Développement durable et de l'Énergie

HOW IS INSPECTION DONE?

For each AO:

- Identification data
- Application of the VBA scope tool
- On the VR
 - use of the correct version of the AEMP (phase?)
 - Conclusion of the AER data being fairly stated
 - Check the misstatements, non conformities, non compliances and recommendations
- Compare AER emission figures with VR emission figures and the ETSSF figures

Direction générale de l'Aviation civile

Ministère de l'Écologie, du Développement durable et de l'Énergie

WHICH TOOLS ARE USED?

The VBA scope tool

Airport pairs in the AER vs EU ETS reduced geographical scope

ANNUAL EMISSIONS REPORT FOR AIRCRAFT OPERATORS

CONTENTS

- Guidelines and conditions
- Reporting year
- Identification of the aircraft operator
- Identification of the Verifier
- Monitoring plan and the monitoring plan
- Total emissions and the monitoring plan
- Use of simplified procedures
- Aircraft types and categories
- Detailed emissions data
- Report totals
- Member State specific information
- Annex: Emissions per aerodrome pair

Reporting year:
Information about this report:
This Annual Emissions Report was submitted by:
Unique Identifier of the aircraft operator (ICAO No.):
Various numbers of flight pairs for the monitoring plan:
Total emissions of the aircraft operator:
This is the amount of emissions to be accounted by the aircraft operator, as calculated in section 5:
Memo-item: Total (sustainable) biomass emissions: 0 t CO2
Memo-item: Total non-sustainable biomass emissions: 0 t CO2

If your competent authority requires you to hand in a signed paper copy of the monitoring plan, please use the space below for signature:

27/05/2014 CHAUVIN Frédéric

Contents Guidelines and conditions Identification and description Emissions overview Emissions data Aircraft

1

Aerodrome Pair (use 4-letter ICAO designator)		Total number of flights per aerodrome pair	Total emissions [t CO2]
Aerodrome of departure	Aerodrome of arrival		
LIMC	LFPO	4	50
LIMC	LFRS	212	200
LIMC	LIMF		100
LIMC	LIMJ		6
LIMC	LIML	8	200

AO/verifier for correction

CRITERIA TO DECIDE WHICH AOs TO INSPECT IN MORE DETAIL

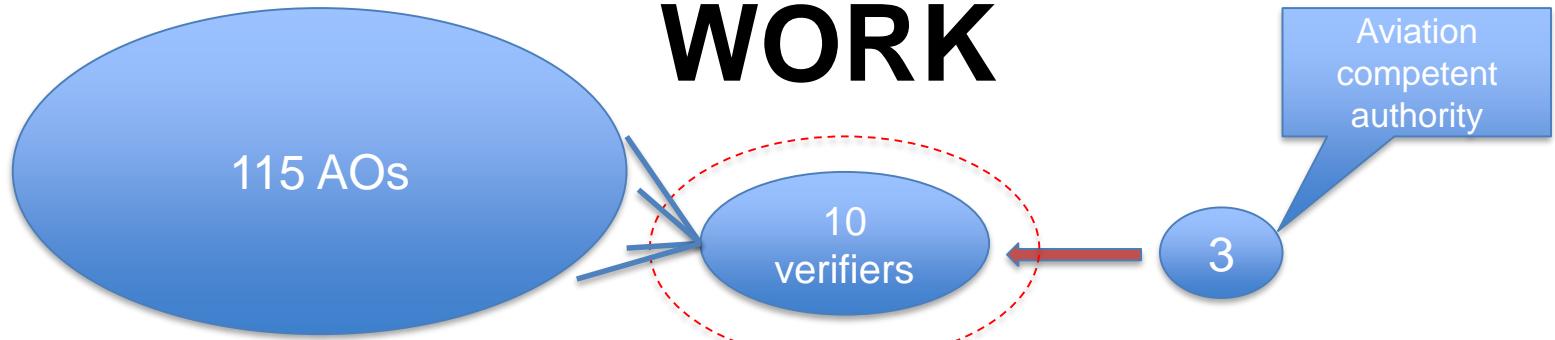

- (AER vs ETS-SF)
If Discrepancies > 2,5% after the VBA scope tool is applied;
Then further investigation
Contact by email: AO+Verifier
- **Study of the opportunity to use the ERE tool**
 - **Criteria: Time spent vs Benefit of the investigation**

Direction générale de l'Aviation civile

Ministère de l'Écologie, du Développement durable et de l'Énergie

UPSTREAM/DOWNSTREAM WORK

For Quality improvement, efforts **focused on the 10 verifiers**.

Action plan

- EC Verification Report template: **Recommended → Mandatory (Done)**
- On-site visits with NAB+Verifier (**Data, documents accessed, limits**)
(Planned)

Goal

Adapt control on the AEMP/AER,

For a **complementary verification** with the verification body.

Direction générale de l'Aviation civile

Ministère de l'Écologie, du Développement durable et de l'Énergie

QUESTION AND DISCUSSION

1. Now the EU ETS regulation is stable, on which improvement action should we focus on?
2. What is the minimum inspection action that must be done?
3. In my opinion, inspection process is very linked to the country's configurations (AOs administered, nb of Verifiers, size of the EU ETS aviation of the CA). What do you think? Possible to group MS by country configuration, usefull?
