1. COUNTRY HIGHLIGHTS

Around half of respondents in Estonia see climate change as a 'very serious' problem (49%), considerably below the EU average (74%) but a 15 percentage point increase since the previous survey in 2015. Roughly one in ten see it as the most serious problem facing the world (9%, EU average 12%).

Around one-third say they have taken personal action to fight climate change in the past six months (34%, EU average 49%). However, when given specific examples this rises to 92% (EU average 90%), suggesting that many do not associate certain actions with tackling climate change.

- The actions most frequently undertaken are trying to reduce waste and regularly separating it for recycling (61%, EU average 71%) and cutting down on consumption of disposable items whenever possible (57%, EU average 56%).
- Respondents in Estonia are significantly more likely than the EU average to have better insulated their home to reduce energy consumption (34%, EU average 18%).
- They are also more likely than the EU average to consider fuel consumption when buying a new car (14%, EU average 9%) and regularly use environmentally-friendly alternatives to their private car (30%, EU average 26%).

Those surveyed in Estonia are less likely than the EU average to agree that fighting climate change and using energy more efficiently can boost the economy and jobs in the EU (58%, EU average 79%) or that reducing fossil fuel imports from outside the EU can benefit the EU economically (38%, EU average 65%).

Over eight in ten believe it is important for their government to set targets to increase the amount of renewable energy used by 2030 (85%, EU average 89%) and provide support for improving energy efficiency by 2030 (83%, EU average 88%).
