I. State of play on the EU ETS – scope and coverage

As explained in the main report, this section relies on the data reported by Italy under Article 21 of the ETS Directive for 2022 as a proxy to make year-to-year comparison possible. For all other countries 2023 data is used.

The EU Emissions Trading System (EU ETS) applies in all 27 EU Member States plus Iceland, Liechtenstein and Norway, as well as to power plants in Northern Ireland¹. Countries' reports under Article 21 of the ETS Directive (Directive 2003/87/EC)² provide an annual overview of the EU ETS implementation. In 2024, countries submitted their reports for 2023.

In 2023, the EU ETS covered emissions from 8 554 installations in the electricity and heat generation and industry sectors, as well as from 379 aircraft operators flying between airports in the European Economic Area (EEA) and on routes from the EEA to Switzerland and to the UK.

Most installations in the EU ETS emit less than 50 000 tonnes CO₂eq (carbon dioxide equivalent) per year (71.4% of the total)³. Of these, 4 823 were classified as installations with low emissions⁴. Most of the remaining installations emit between 50 000 and 500 000 tonnes CO₂eq per year⁵ (21.4% of the total), and only a fraction emits over 500 000 tonnes CO₂eq per year⁶ (7.2% of the total). Figure A shows the breakdown of installations in the EU ETS by the level of emissions in 2023.

Countries reported that 167 installations were excluded from the scope of the EU ETS in 2023. For 111 of these installations, the exclusion resulted from a reduction in their capacity below the 20 MW of thermal input threshold (applicable to combustion installations in Annex I to the ETS Directive). Combustion installations below that threshold are out of the scope of the system.

To reduce the administrative burden, countries can exclude installations with emissions below 25 000 tonnes CO₂eq per year from the EU ETS if alternative measures to reduce emissions are implemented⁷. Since 2021, it is also possible to exclude from the EU ETS installations that

² Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a system for greenhouse gas emission allowance trading within the Union and amending Council Directive 96/61/EC ([OJ L 275](#), 25.10.2003)

emit less than 2 500 tonnes CO₂eq per year⁸ if certain conditions have been met, as well as reserve or back-up units that operate no more than 300 hours per year⁹.

In 2023, 15 countries opted to exclude installations from the system and apply equivalent measures to reduce emissions. These installations accounted for a total of 4 Mt CO₂eq and 0.3% of installations' total emissions under the EU ETS.

In aviation, most of the 379 regulated operators in 2023 were commercial operators (70% of the total)¹⁰. A total of 169 operators (45%) qualified as small emitters, including almost all of 115 non-commercial aircraft operators (97%).

In addition to CO₂ emissions, the EU ETS covers emissions of N₂O (nitrous oxide) from nitric, adipic and glyoxylic acids' and glyoxal production and PFCs (perfluorocarbons) from primary aluminium production. In 2023, 22 countries reported permits for ETS activities releasing emissions other than CO₂. Only Norway declared carbon capture and storage activities. Countries reporting emissions other than CO₂ from ETS activities are shown in Table A.

⁸ Under Article 27a (1) of the ETS Directive. An installation that exceeds the threshold in any calendar year is required to be re-entered into the scope of the EU ETS.

⁹ Under Article 27a (3) of the ETS Directive. An installation that exceeds the threshold in any calendar year is required to be re-entered into the scope of the EU ETS.

¹⁰ An example of a commercial aircraft operator is a passenger airline providing services to the public. An example of a non-commercial aircraft operator is a privately owned aircraft.

IV. EU ETS implementation framework

As explained in the main report, this section relies on the data reported by Italy under Article 21 of the ETS Directive for 2022 as a proxy to make year-to-year comparison possible. For all other countries 2023 data is used.

Table F. Accreditation and verification in the EU ETS (2023)¹³
