

Impact Assessment on Heavy Duty Vehicles (HDV) CO₂ emission standards

Fields marked with * are mandatory.

Impact Assessment on Heavy Duty Vehicles (HDV) CO₂ emission standards

The July 2016 Commission's strategy for low-emission mobility recalls that mobility is an essential component of the shift to the low-carbon, circular economy needed for Europe to stay competitive and be able to cater to the mobility needs of people and goods. The strategy set the ambition for the transport sector to reduce greenhouse gas emissions at least by 60% compared to 1990 by mid-century and be firmly on the path towards zero. Action on vehicles' fuel/CO₂ emission performance is one of the key levers to tilt the transport sector in the right direction.

The 2030 climate and energy framework agreed by EU Heads of State and Government in October 2014 requires a 30% reduction in non-ETS sector GHG emissions by 2030 compared to 2005. Road transport represents 1/3 of the non-ETS GHG emissions and heavy-duty vehicles contribute to about 1/4 of road transport emissions and some 5% of total EU GHG emissions.

The May 2014 Strategy Communication on reducing HDV fuel consumption and CO₂ emissions ([COM/2014/0285](#)) emphasises the importance of closing the knowledge gap regarding the CO₂ emissions of lorries and buses with a view to improving market transparency.

The July 2016 Strategy for low-emission mobility furthermore announced that there is a need to curb CO₂ emissions from HDVs.

On 11 May 2017 the Technical Committee for Motor Vehicles has approved under type approval legislation a certification procedure for the determination of the CO₂ emissions and fuel consumption of new HDVs, using the results from [VECTO simulations](#), which has been developed by the European Commission since 2010. HDV manufacturers will have to run VECTO at the end of the production line and declare such information at the time of registration as of 2019.

On 31 May 2017, as part of the Europe on the Move set of initiatives, the Commission adopted a proposal for the monitoring and reporting of such HDV CO₂ emissions and fuel consumption. The data collected will be made publicly available by the European Environment Agency, starting in 2020 to cover data monitored in 2019.

This [inception impact assessment](#) will look into different options for setting the first EU measures to actively curb CO₂ emissions from HDVs, including CO₂ emission standards.

It should be noted that EU manufacturers account for some 40% of global production. Furthermore, other parts of the world, such as the United States, China, Japan and Canada, have already introduced HDV fuel economy standards, and some European manufacturers participate in these schemes.

For the purposes of the present consultation the term HDV should be understood as including (For the definition of vehicle categories see [Directive \(EC\) 2007/46](#), Annex II, part A):

- goods vehicles of categories N2 and N3 and
- passenger vehicles of categories M2 and M3 and
- all trailers of categories O3 and O4.

The Commission is carrying out this consultation in order to be properly informed by public opinion in preparation for possible future legislative action in the area of CO₂ emissions from HDVs, the results of which will be published in consolidated form.

Parts 1 to 5 of this consultation are intended to be completed by every respondent to the extent possible.

Part 6 is mainly intended for experts in the field but of course every respondent may complete it as he wishes.

If data, other information or studies are available which are relevant to the assessment, these can be submitted as part of a stakeholder's general comments or directly to the mail box.

1. General information about respondent

* 1.1. In what capacity are you completing this questionnaire?

Other

* If other, please specify:

Text of 3 to 200 characters will be accepted

Automotive industry

* 1.5. Please give your name if replying as an individual/private person, otherwise give the name of your organisation:

Text of 3 to 200 characters will be accepted

Verband der Automobilindustrie e.V. (VDA) - German Association of the Automotive Industry (VDA)

1.6. If your organisation is registered in the [Transparency Register](#), please give your Register ID number:

20 character(s) maximum

95574664768-90

If your organisation is not registered, you can [register now](#). Please note that contributions from respondents who choose not to register will be processed as a separate category 'non-registered organisations/business'.

* 1.7. Please give your country of residence/establishment:

Germany

1.8. If your organisation is involved in the implementation of the HDV legislation, please indicate its role (e.g. manufacturer, system supplier, technical service,...):

200 character(s) maximum

* 1.9. Please indicate your preference for the publication of your response on the Commission's website: (Please note that regardless of the option chosen, your contribution may be subject to a request for access to documents under [Regulation 1049/2001](#) on public access to European Parliament, Council and Commission documents. In this case the request will be assessed against the conditions set out in the Regulation and in accordance with applicable [data protection rules](#).)

- ☒ Under the name given:
I consent to publication of all information in my contribution and I declare that none of it is subject to copyright restrictions that prevent publication
- ☐ Anonymously:
I consent to publication of all information in my contribution and I declare that none of it is subject to copyright restrictions that prevent publication

Questions

The questions below are based on the initial analysis carried out by the Commission and presented in its Inception Impact Assessment to which you may refer for further background on each specific question. Fuel consumption and CO₂ emissions of Heavy-Duty Vehicles' (HDVs) are treated together as they are strongly correlated and proportional: both would be certified and monitored together.

2. Main problem to address

The following 3 key problems have been identified in the context of the Inception Impact Assessment where more detailed information can be found. In your view, how important are the problems to be addressed?

	Very important	Important	Somewhat important	Not important	I don't know/ no views
Growing GHG emissions from the heavy-duty vehicle sector	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Increasing competitiveness challenges for vehicle manufacturers	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Transport operators and their clients miss out on possible fuel savings and reduced fuel bills	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Are there other key problems to be addressed?

200 character(s) maximum

It is important to not only look at the vehicle manufacturing industry itself but also take into account options for an improved and efficient utilization of HDV vehicles (integrated approach)

3. The need for EU action

There is a single market for HDVs across the EU. If no EU action was taken to address the problem, Member States might adopt individual approaches to reduce HDV CO₂ emissions, in order to achieve the needed reductions for the non-ETS sector. In your view, what would be likely to happen without EU action?

	Likely	Neutral	Unlikely
Member States would individually implement legislation to reduce HDV CO ₂ emissions	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Legislation introduced by individual Member States would lead to market fragmentation and higher costs	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Member States would have difficulty to achieve the necessary reductions to meet EU climate goals	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

Are there other potential effects?

200 character(s) maximum

A European approach is required, international alignment of the different regulatory regimes should be pursued and worked on actively.

4. Main policy objectives

The following 3 key policy objectives have been identified in the context of the Inception Impact Assessment where more detailed information can be found.

1. Reduce the climate impact of HDVs in line with the requirements of EU climate policy and the 2030 climate and energy framework.
2. Contribute to the improvement of the competitiveness of HDV and component manufacturers (suppliers to HDV manufacturers)
3. Facilitate a reduction in the total cost of ownership for transport operators, most of which are SMEs.

In your view, how important are the following policy objectives?

	Very important	Important	Somewhat important	Not important	I don't know
Reduce the climate impact of HDVs	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Contribute to the improvement of the competitiveness of the European HDV and component manufacturers	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Facilitate a reduction in the total cost of ownership for transport operators	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Are there other key objectives to be reached?

200 character(s) maximum

5. Form that action should take to reduce HDV CO₂ emissions

Please indicate, by order of importance, your preferred options to reduce new HDVs CO₂ emissions, and contribute to the 2030 Energy and Climate Targets (with 1st being your most preferred option and 7th the least preferred)?

	1 st	2 nd	3 rd	4 th	5 th	6 th	7 th	8 th
Legislation setting HDV CO ₂ emissions targets at EU level	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Legislation defining a CO ₂ labelling scheme at EU level	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use of vehicle or fuel taxes or other incentives by Member States to affect vehicle choice and use	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
A voluntary agreement with industry to reduce new vehicle CO ₂ emissions	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Member State actions to influence vehicle choice and use in other ways such as labelling schemes based on VECTO, best practice dissemination	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Development of international standards for HDV fuel economy	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
No action	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

6. Options to consider for regulating CO₂ emissions of HDV

If CO₂ emissions of HDVs will be regulated by defining binding targets, the following options are considered.

6.1. Options for the basic regulatory approach

- Option A: CO₂ emission standards would be defined for the engines only.
- Option B: CO₂ emission standards for the whole vehicles, to be based on VECTO simulations
- Option C: Separate CO₂ emission standards for engines and complete vehicles

Please indicate the order of your preference (numbers 1, 2, 3) for the different options:

	1 st	2 nd	3 rd	4 th
A	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
B	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
C	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

If other, please specify:

200 character(s) maximum

The whole vehicle approach should be the chosen option. Every other option will likely lead to sub-optimal solutions which carry the risk of significant market distortions and high costs.

Comments on your choices on options for the basic regulatory approach:

300 character(s) maximum

6.2. Options for the types of targets

- Option A: targets at the level of each individual vehicle; CO₂ emissions would be limited at the level of individual vehicles/engines (i.e. specification of limit values)
- Option B: average targets per vehicle group on the basis of the vehicles placed on the market by each manufacturer (similar approach as for cars and light commercial vehicles)

Please indicate the order of your preference (numbers 1, 2, 3) for the different options:

	1 st	2 nd	3 rd
A	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
B	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Comments on your choices on the options for the types of targets:

300 character(s) maximum

A high level of flexibility should be applied. Although the CV industry differs significantly for reasons of consistency an adept adaptation of the cars/ LCV regulation seems reasonable.

6.3. Options for the timing of the targets

- Option A: fixed dates of application
- Option B: annual reduction targets

	1 st	2 nd	3 rd
A	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
B	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Comments (please indicate also your suggestions for the first application date of targets as well as the quantitative annual reductions (for option B)):

300 character(s) maximum

Targets should only be set in a medium-/ long-term perspective in order to take account of production/ investment cycles and allow technological improvements to be developed and established in the industry.

6.4. Options for the setting of the quantitative targets

- Option A: Targets (initial values and annual reductions, if applicable) are defined ex-ante by the legislation by relative technology improvements over some baseline (as for cars and vans)

- Option B: Targets for the year $y + n$ ($n \geq 1$) are defined by the performance of a certain percentile of best performing vehicles in the year y ("top runner" approach) with a minimum yearly target

	1 st	2 nd	3 rd
A	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
B	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Comments your choices on options for the setting of the quantitative targets:

300 character(s) maximum

6.5. Options for the scope of the legislation

VECTO and the underlying type approval legislation will provide certified CO₂ emission values for the four main groups of HDVs (Vehicle groups 4, 5, 9 and 10 as defined in Table 1 of Annex I of the [draft Commission Regulation](#) implementing Regulation (EU) No 595/2009 as regards the determination of the CO₂ emissions and fuel consumption of heavy-duty vehicles, which are responsible for about 65% of all HDV CO₂ emissions), which would also be addressed by the first step of regulatory binding targets. Currently VECTO provides the CO₂ emission values for these trucks only for the long haul and regional delivery mission profiles.

However, there are also a limited (between 2 – 10% (indicative figures to be confirmed in the IA)) number of vocational vehicles in these groups, which serve for special purposes, for instance construction sites or waste collection.

- Option A: the targets are applied to all vehicles within the 4 main vehicle groups, regardless of their use and on the basis of the long haul and regional delivery mission profiles
- Option B: Separate targets are applied to vocational vehicles within the 4 main vehicle groups, on the basis of VECTO urban, municipal and construction mission profiles
- Option C: certain vocational vehicles to be specified are excluded for this first regulatory step

Please indicate the order of your preference (numbers 1, 2, 3) for the different options:

	1 st	2 nd	3 rd	4 th
A	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
B	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
C	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other option	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
--------------	-----------------------	-----------------------	-----------------------	-----------------------

Comments on your choices on options for the scope of the legislation:

300 character(s) maximum

Can you suggest technical criteria for the definition of 'vocational' trucks?

200 character(s) maximum

6.6. Options for the metric for expressing the targets

The CO₂ emission targets will have to be formulated in terms of a certain "metric", meaning that the regulatory target corresponds to CO₂ mass emissions divided by some "transport utility parameter", e.g. mileage travelled (km), mileage travelled times weight (km x t) or volume (km x m³) transported.

- Option A: targets expressed in g CO₂/km,
- Option B: targets expressed in g CO₂/(km x t)
- Option C: targets expressed in g CO₂/(km x m³)
- Option D: targets expressed in a combination of several metrics listed in options A to C

	1 st	2 nd	3 rd	4 th	5 th
A	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
B	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
C	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
D	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Other option	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

If other, please specify:

200 character(s) maximum

Comments on your choices on options for the metric for expressing the targets:

300 character(s) maximum

Option A does not at all reflect the market-inherent drive for efficiency. It is essential that the metrics reflect "the work done by the vehicle".

Would you suggest any other metric for expressing the targets?

200 character(s) maximum

g CO2/ Pkm for buses

6.7. Options regarding mission profiles

For mainstream HDVs used for the transport of goods, VECTO simulations provide four different CO₂ emission values: for a regional delivery and long haul driving pattern, each driven "empty" and a "typically full" payload. Targets may apply to each of these four emission profiles separately or as a weighted average.

	YES	NO	Neutral
Should all four mission profiles be applied to all HDVs?	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Should the targets be defined for each mission profile separately?	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Should the targets be compared with a weighted average of the mission profiles?	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

If no, according to what criteria should certain mission profiles not be applied and to what sorts of HDVs?

200 character(s) maximum

6.8. Options regarding utility parameters

Any future legislation defining targets aims at achieving a certain level of CO₂ savings for the least overall costs while ensuring that the requested transport utility is still available. If the design of a vehicle (e.g. stronger engine or higher transport volume) has an impact on CO₂ emissions and the vehicle's utility, it may have to be factored into the applicable target (e.g. by choosing appropriate utility factors and formulas setting the targets as a function of thereof). In the case of cars and vans, mass is used as an utility parameter in the current legislation on CO₂ emission standards.

Should utility parameters be used for regulating CO₂ emissions from HDVs?

☒ YES ☐ NO ☐ Neutral

If yes, what utility parameter should be used and factored in for setting the targets?

200 character(s) maximum

6.9. Options for elements supporting cost-effective implementation of the targets

Several options can be considered to support the cost-effective implementation of the targets, which may however also create additional administrative burden:

- Pooling: Several manufacturers may decide to combine their vehicle fleets for assessing the compliance with the regulatory targets (as in the case in the cars and vans CO₂ legislation.)
- Banking and borrowing: A manufacturer may compensate non-compliance with targets in a given calendar year by over-achievements in previous ("banking") or future ("borrowing") years according to well defined regulatory rules.
- Trading: a manufacturer over-achieving its targets may sell corresponding credits in order to facilitate compliance of other manufacturers.
- Transfer of credits between vehicle groups of a manufacturer. In the case of targets set at the level of each vehicle group, a manufacturer may transfer credits between the different groups of its vehicles.

What are your views on these options?

	YES	NO	Neutral
Pooling of manufacturers	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Banking and borrowing	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Trading between manufacturers	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Transfer of credits between vehicle groups of a manufacturer	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

Please provide your comments on these or possible other elements for supporting cost-effective implementation:

500 character(s) maximum

All measures which support a flexible and cost-effective implementation should be applied.

7. Governance - HDV CO₂ certification and real driving emissions

Under the current process, CO₂ emissions of HDVs are certified on certain pre-defined mission profiles, the design of which is inspired by real driving data.

What are your views:

	YES	NO	Neutral
Will it be important to develop processes assessing the certified CO ₂ emissions against real driving emissions of HDVs?	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
If such processes are being developed, should there be some ex-post feedback mechanism requiring compliance of the certified CO ₂ emissions with real driving emissions (within certain tolerances)?	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Can you suggest such a process?

500 character(s) maximum

8. Additional comments and Upload of Documents

If you wish to add further information, comments or suggestions – within the scope of this questionnaire – please feel free to do so here:

1000 character(s) maximum

O3 trailers should not be included in the legislation. The inclusion of O4 trailers should be postponed until a sound and feasible CO2 certification process has been developed.

It is essential that VECTO will be updated regularly in order to properly reflect technological advancements. While we support the tank-to-wheel-approach as a first step VECTO should incorporate a well-to-wheel-approach in the future.

Technical penetration rates must be taken into account when setting emission standards.

In addition, you could also upload a document providing further information, comments or suggestions.

The maximum file size is 1 MB
