Dear Madam/Sir,

The exchange of green certificates does not help at all to either the reduction of green house gases or the increase of the share of renewable energy. Governments do not invest in creating energy plants from renewable sources they just buy already existing green energy. On the other hand, this policy is combined with trade emission systems, which cause also the same bad results for the same reasons.

Being always at your disposal.

Yours sincerely,

Nikolaos Tsemperlidis, President KEPKA, Member of Economic and Social Council of Greece and Alternate Member of EESC

Evangelia Kekeleki, General Secretary KEPKA, Vice President Single Market Observatory, Member EESC and Member ECCG
