1. COUNTRY HIGHLIGHTS

Over three-quarters of respondents in Luxembourg believe climate change is a 'very serious' problem (76%, EU average 74%), an increase of 7 percentage points since the previous survey in 2015. More than one in ten see it as the most serious problem facing the world (12%), equal to the EU average but a 6 pp decrease since 2015.

Those surveyed in Luxembourg are significantly more likely than the EU average to say they have taken personal action to fight climate change in the past six months (74%, EU average 49%). When given specific examples, the share rises to 97%, suggesting many do not associate certain actions with tackling climate change.

- For all actions covered in the survey, the proportion of respondents in Luxembourg giving a positive answer exceeds the EU average.

- Nearly nine in ten (87%) say they try to reduce waste and regularly separate it for recycling (EU average 71%). Roughly three-quarters (73%) also try to cut down on consumption of disposable items whenever possible (EU average 56%).

However, respondents in Luxembourg are less likely than the EU average to agree that reducing fossil fuel imports from third countries can benefit the EU economically (52%, EU average 65%), although over eight in ten agree that fighting climate change and using energy more efficiently can boost the EU economy and jobs (82%, EU average 79%).
