

Country fact sheet: Slovenia

1. Total greenhouse gas emissions

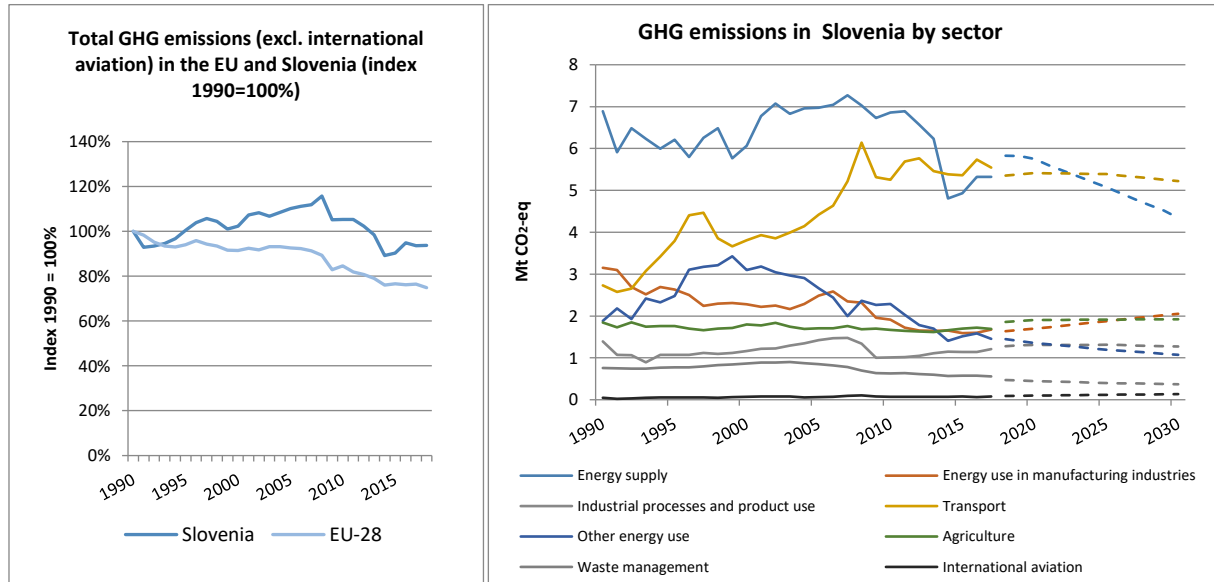

Figure 1: Left hand side: Total greenhouse gas emissions (excl. international aviation) 1990-2018 (index 1990 = 100 %). Right hand side: Greenhouse gas emissions by sector¹ – historical emissions 1990-2017, projections 2018-2030 (Mt CO₂-eq).

Figure 2: Share of emissions covered by the ETS and the ESD (2017).²

¹ The sectors in the figure correspond to the following IPCC sectors: Energy supply: 1A1, 1B and 1C. Energy use in manufacturing industries: 1A2. Industrial processes and product use: 2. Transport: 1A3. Other energy use: 1A4, 1A5 and 6. Agriculture: 3. Waste: 5. International aviation: memo item.

² Excluding international aviation, CO₂ from domestic aviation and NF₃.

2. ETS emissions

Figure 3: ETS emissions 2005-2018 (Mt CO₂-eq).³

3. Emissions in Effort Sharing sectors

Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2018, 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO₂-eq).

³ The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.

4. Land use, land use change and forestry

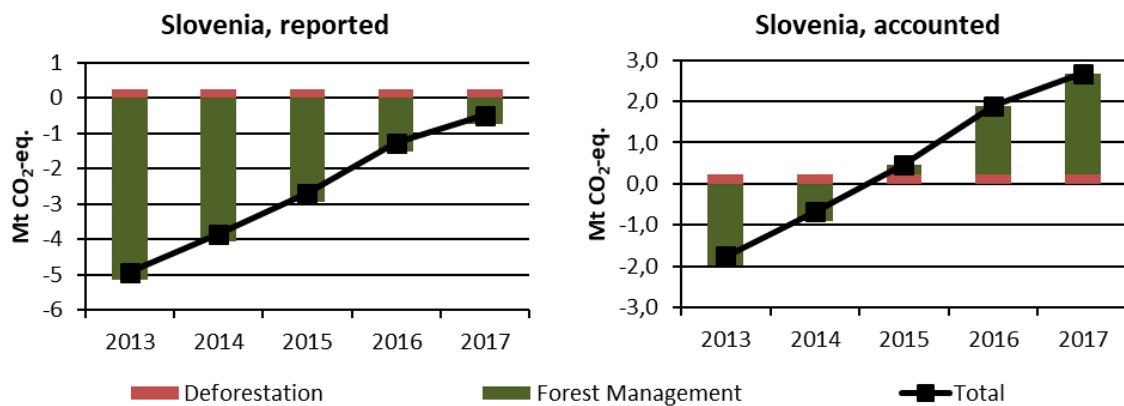

Figure 5: Reported and accounted emissions and removals from LULUCF (Mt CO₂-eq.)⁴

Reported quantities under the Kyoto Protocol for Slovenia show net removals of, on average, -2.7 Mt CO₂-eq for the period 2013 to 2017. In this regard, Slovenia contributes with 0.6% to the annual average sink of -411.9 Mt CO₂-eq of the EU-28. Accounting for the same period depicts net debits of, on average, 0.5 Mt CO₂-eq, which represents -0.5% of the EU-28 accounted sink of -111.9 Mt CO₂-eq. Reported net removals depict a steep decline over the five-year period, while accounted quantities change from credits to debits over the same period. This makes Slovenia one of ten EU Member States with accounted debits for at least some years in this preliminary accounting exercise. Slovenia is the only EU Member State that does not provide quantities to report and account for Afforestation/Reforestation.

Dominating reported quantities are removals by Forest Management, which decrease markedly over the five-year period. Emissions by Deforestation show small and nearly unchanged quantities the emission budget of the LULUCF sector.

Credits by Forest Management were the dominating accounting quantity between 2013 and 2014. . After 2015, Forest management generates debits, making Slovenia one of twelve EU Member States with accounted debits in this preliminary accounting exercise. Debits by Deforestation remain stable and form only a minor part of the accounted quantities.

⁴ The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the 'explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol'.
